Technical Information

Product Code B001

BATTERY ACID 1.27 SG

BATTERY ACID is a ready to use electrolyte suitable for filling most types of new commercial lead acid batteries, and for topping up and adjusting the acid strength of used batteries.

FOR NEW OR USED BATTERIES

READY TO USE

DIRECTIONS FOR USE

When filling new batteries always refer to the manufacturers recommendations as to the grade of acid and method of charging.

Usually only distilled water or deionised water is required for the routine topping up of batteries.

When the addition of acid is needed for the adjustment of the acid strength of the battery the manufacturers recommendations must be followed, and the necessary safety precautions taken.
