Technical Information

Product Code D007

## **DEWAXER READY TO USE**

DEWAXER READY TO USE is a formulated solvent cleaner used for the removal of protective wax films from new vehicles using a hot water pressure washer, or applied by hand.

DEWAXER READY TO USE may also be used as an engine degreaser or for cleaning small metal parts. It is safe to use on most surfaces. However, it may affect some rubber and plastic materials.

Note: 'Copolymer' type protective coatings will not be removed by this product, and specially formulated products for this purpose are available from Sure Chemicals Ltd

### **USE THROUGH HOT WATER PRESSURE WASHERS**

#### **REMOVES PROTECTIVE WAX COATINGS**

#### **DIRECTIONS FOR USE**

DEWAXING: Hot water pressure washers:

Remove wiper blades from vehicle before applying DEWAXER. Insert the chemical pick-up tube into the DEWAXER, and set the chemical control to give about 1% at the nozzle. Open the temperature control to its maximum setting (at least 75°C is required for effective dewaxing). Hold the lance of the pressure washer approximately 6" away from bodywork of the vehicle and commence to clean the surface of the vehicle, working in small areas until the wax is removed.

Very hard and stubborn wax coatings may require higher temperatures and more chemical at the nozzle.

DEWAXING by hand:

Spray DEWAXER all over the vehicle and allow to soak into the wax for about 5 - 10 minutes. Wipe over the surface and remove the wax using a clean rag soaked in DEWAXER, and then wash off with water.
