Technical Information

Product Code D012

DEMINERALISED WATER

DEMINERALISED WATER is a purified water suitable for use in batteries, steam irons, boilers, heating systems etc., where freedom from hard water minerals or harmful and corrosive ions is required.

The use of DEMINERALISED WATER helps prevent the build up of limescale deposits in heaters, pipework, radiators etc.

DEMINERALISED WATER is produced by passing town water through ion-exchange resins that remove the calcium and other hard water minerals by a chemical exchange process. Treated water typically contains less than 10 ppm water hardness and has a conductivity of less than 25 micro siemens per centimetre.
