Technical Information

Product Code W002

## **WATER SOFTENER**

WATER SOFTENER is a liquid, organic, sequestering additive which will help to prevent lime scale and water hardness deposits in hot water pressure washers, steam cleaners, boilers, heaters, heat exchangers, storage tanks etc.

It's action is to chemically block the calcium, magnesium, iron and other minerals, which may be deposited from hard water during heating, storage or processing.

NOTE: WATER SOFTENER does not remove hard water minerals, and treated water is not recommended as an alternative to de-ionised water or distilled water, i.e. for batteries or chemical applications

### **DIRECTIONS FOR USE**

Automatic dosing equipment

Add to water softener header tank and use in accordance with equipment manufacturer's recommendations and operating instructions.

Manual dosing

Use 1ml WATER SOFTENER per litre of 100ppm water hardness or more, pro rata, as required.
